

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

Date	11 October 2022
Team ID	PNT2022TMID19363
Project Name	Crude Oil Price Prediction
Maximum Marks	4 Marks

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	<ul style="list-style-type: none"><li>• Registration through Form</li><li>• Registration through Gmail</li><li>• OAuth Authentication</li><li>• Registration through LinkedIn</li></ul>
FR-2	User Confirmation	<ul style="list-style-type: none"><li>• Confirmation via Email</li><li>• Confirmation via Mobile OTP</li></ul>
FR-3	User Login	<ul style="list-style-type: none"><li>• Login through username and password</li><li>• Login through Gmail</li><li>• Login through LinkedIn</li><li>• OAuth Authentication</li></ul>
FR-4	Primary specifics	<ul style="list-style-type: none"><li>• Sync oil price every second</li><li>• Show Up and Down graph in real-time in accordance with the oil price</li></ul>
FR-5	Additional Requirement	<ul style="list-style-type: none"><li>• Read the latest news</li><li>• View price charts</li><li>• Review futures on the selected quotation</li><li>• Analyze historical price trends</li><li>• Check exchange rates and commodities futures</li><li>• Volume of trades happening now</li></ul>
FR-6	System Responsibility	<ul style="list-style-type: none"><li>• Allowing the user to select a date</li><li>• Track the previous results</li><li>• The pricing news should be updated</li></ul>

### Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	<ul style="list-style-type: none"><li>• To utilize a system easily and accelerate routine operations, it must have a logical user interface.</li><li>• Anyone who registers on the portal can utilize the system.</li></ul>
NFR-2	<b>Security</b>	<p>The following is a list of some of the factors that have been found to prevent malicious or unintentional access, usage, modification, destruction, or disclosure of the software:</p> <ul style="list-style-type: none"><li>• Maintain particular log or historical data sets.</li><li>• Apply specific cryptography methods.</li><li>• Limit the number of devices that can access the website for predicting the price.</li><li>• Verify the integrity of the data.</li></ul>
NFR-3	<b>Reliability</b>	<ul style="list-style-type: none"><li>• At the time of entry, all user variable data will be committed to the database.</li><li>• By using the available backup procedures and techniques, data corruption is avoided.</li></ul>
NFR-4	<b>Performance</b>	<ul style="list-style-type: none"><li>• The system must allow for the simultaneous use of many users at all times.</li><li>• The accuracy of the price should be at the maximum.</li></ul>
NFR-5	<b>Availability</b>	<ul style="list-style-type: none"><li>• The system should always be accessible, allowing for simple user access.</li><li>• A replacement page will be displayed in the event that hardware or data base failure increases, and data should be obtained to restore the system.</li></ul>
NFR-6	<b>Scalability</b>	<ul style="list-style-type: none"><li>• Identifies the maximum workloads at which the system will still operate well.</li><li>• Focus on the measurement of the system's response time under various load levels.</li></ul>
